Calgary AB T2P 3Y7

Dear Mr. Pellegrin:

**RE: COMMINGLED PRODUCTION - INTERIM APPROVAL
ADVANTAGE BLACK C- 051-B/094-H-12; WA# 24906**

The Commission has reviewed your application received February 2, 2009 for approval to commingle gas production from the Charlie Lake and A Marker zones encountered in the subject well. The Commission considers the proposed completion intervals for the Charlie Lake to be part of the Yellow Marker formation.

Your request for an interim approval is intended to allow the acquisition of additional supporting data for a formal commingling application. As noted in your application, reservoir pressures and gas compositions should be similar for the two zones. Both zones are expected to be marginal producers, therefore, commingled production through a single tubing string is expected to maximize production and reserve recovery.

We wish to advise you that your application to commingle production from these zones is hereby granted **interim** approval, under the authority of section 41 of the *Drilling and Production Regulation*, subject to the following conditions:

1. Production from the Yellow Marker and A Marker formations may be commingled.
2. A supplementary application for commingled production, with supporting test data and gas analysis, must be submitted, with proposed allocation factors for production reporting.
3. AOF and reservoir pressure reports must be filed for each zone as per the requirements of sections 84 and 95 of the *Regulation*.
4. Formal approval for commingled production **will not** be authorized until all of the above listed conditions have been met.

Should you have any questions, please contact the undersigned at (250) 952-0366 or Kelly Okuszko at (250) 952-0325.

Sincerely,

Richard Slocomb, P. Eng.
Supervisor, Reservoir Engineering
