Calgary AB T2P 4J8

Dear Mr. White:

**RE: APPROVAL FOR COMMINGLED PRODUCTION  
CNRL N GRIZZLY b-27-H/93-I-15; WA# 18372**

The Commission has reviewed your application dated October 21, 2005 for approval to commingle gas production from the Cadotte and Falher zones encountered in the subject well.

The Commission designates the gas pools under application to be the Grizzly North – Cadotte “B” and Falher “A”.

Due to open hole completion in the offsetting well CNRL et al N Grizzly d-40-H/93-I-15 (WA 8565), commingling of production from the Cadotte and Falher zones has occurred since August 1994, although no formal commingling approval was granted. Cumulative production from the well d-40-H through September 2005 is 97.3 10<sup>6</sup> m<sup>3</sup>. In view of this commingling in the subject well is considered appropriate. Gas analyses appear to be similar for the two pools. Commingled production is expected to maximize production and recovery from these zones.

We wish to advise you that your application to commingle production from these zones is hereby granted approval, under the authority of Section 41 of the *Drilling and Production Regulation*, subject to the following conditions:

1. Production from the Cadotte (1899.0 – 1902.0 mKB) and Falher (2016.0.0 – 2018.0 mKB) may be commingled.
2. Gas, condensate and water production should be allocated on the Ministry of Provincial Revenue BC S-1 and BC S-2 forms on the basis of Cadotte 60 % and Falher 40%.
3. This approval may be modified at a later date if deemed appropriate through a change in circumstances.

Sincerely,

Richard Slocomb, P.Eng.  
A/Director  
Resource Conservation Branch
