Dear Mr. Knibbs:

RE: COMMINGLED PRODUCTION APPROVAL
CNRL WEASEL d-A99-I/94-A-15; WA# 22140

The Commission has reviewed your application dated April 10, 2007 requesting permission to commingle production from the Gething and Nordegg zones encountered in the subject well.

The Commission has designated these pools as the Weasel – Gething “G” and Nordegg/Baldonnel “B” gas pools.

Interim commingling was approved on March 12, 2007 to allow the acquisition of additional supporting data for a formal commingling application. The Gething has been mapped as a single well pool. The Gething was perforated and fracture stimulated and tested at $3.6 \times 10^3 \text{ m}^3/\text{d}$. The Nordegg/Baldonnel was mapped as a two well pool. The Nordegg/Baldonnel in the subject well was perforated and fracture stimulated and tested at $39.5 \times 10^3 \text{ m}^3/\text{d}$. Commingled production through a single coil string is expected to maximize production and reserve recovery from the Gething zone. CNRL is the operator of all wells in these pools.

We wish to advise you that your application to commingle production is hereby approved, under the authority of Section 41 of the *Drilling and Production Regulation*, subject to the following conditions:

1. Production from the Gething (973.0–985.5 mKB) and Nordegg/Baldonnel (1007.0–1009.0 mKB) zones may be commingled.
2. Gas, condensate and water production should be allocated on the Ministry of Small Business and Revenue BC S-1 and BC S-2 forms on the basis of Gething 10% and Nordegg/Baldonnel 90%.
3. This approval may be modified at a later date if deemed appropriate through a change in circumstances.

Should you have any questions, please contact the undersigned at (250) 952-0366.

Sincerely,

Richard Slocomb, P.Eng.
Supervising Reservoir Engineer
