Chris Dittaro
Sr. Engineering Technologist
ConocoPhillips Canada Resources Corp.
P.O. Box 130, 401-9th Avenue SW
Calgary, Alberta T2P 2H7

Dear Ms. Dittaro:

RE: INTERIM COMMINGLING APPROVAL
BRC HTR et al Ojay c-93-H/93-I-9; WA# 20705

The OGC has reviewed your application dated April 5, 2007 requesting permission for interim approval to commingle gas production from the Falher C, Cadomin and Nikanassin zones in the subject well.

Interim approval to commingle the Cadomin and Nikanassin zones in the subject well was granted on February 24, 2006. ConocoPhillips now proposes to commingle the Falher C with Cadomin and Nikanassin zones. The Falher C is a thin overpressured zone. All three zones are sweet gas and expected to have similar pressures. We concur that commingled production is expected to maximize gas production and reserves from the three zones.

We wish to advise you that your application to commingle production is hereby granted **interim** approval, under the authority of Section 41 of the *Drilling and Production Regulation*, subject to the following conditions:

1. A production test must be completed to establish the AOF, and initial reservoir pressure for the Falher C and commingled Cadomin/Nikanassin zones and reports filed as per the requirements of Sections 84 and 95 of the *Regulation*.
2. A formal application for commingled production must be submitted with supporting test data (spinner survey), gas analysis and proposed allocation factors for production reporting both gas and liquids.
3. Formal approval for commingled production **will not** be authorized until all of the conditions above have been met.

Should you have any questions, please contact the undersigned at (250) 952-0366.

Sincerely,

Richard Slocomb, P. Eng.
Supervising Reservoir Engineer
