Dear Ms. Whelen:

**RE: APPROVAL FOR COMMINGLED PRODUCTION
HOME ET AL MARTIN c-98-B/94-H-6; WA# 4813**

The Commission has reviewed your application dated October 30, 2003 for approval to commingle gas production from the Baldonnel and Halfway zones encountered in the subject well.

The Commission designates the gas pools under application to be the Martin - Baldonnel "D" and Halfway "D".

The Baldonnel "D" pool is being produced by this single well and has depleted approximately half of the expected reserves. The Halfway "D" is mapped as a single well pool and has never been produced, however evidence of depletion following testing would indicate limited gas reserves. Both pools contain sweet gas. Commingled production is expected to increase the productive life of this well, thereby increasing recoverable reserves.

We wish to advise you that your application to commingle production from these zones is hereby granted approval, under the authority of Section 41 of the *Drilling and Production Regulation*, subject to the following conditions:

1. Production from the Baldonnel (1099.0 - 1107.0 mKB) and Halfway (1213.5 - 1218.0 mKB) formations may be commingled.
2. Gas, water and condensate production should be allocated on the Ministry of Provincial Revenue BC S-1 and BC S-2 forms on the basis of Baldonnel 85 % and Halfway 15%. The allocation factors may be amended to reflect results of any future tests.
3. A valid reservoir pressure measurement must be obtained on the Baldonnel zone prior to commingling.
4. This approval may be modified at a later date if deemed appropriate through a change in circumstances.

Sincerely,

Ron G. Stefik, ASCT
Sr Reservoir Engineering Technician
