Dear Mr. Stark:

**RE: APPLICATION FOR COMMINGLED PRODUCTION APPROVAL
DECL ET AL BUICK d-48-J/94-A-11; WA# 14400**

The OGC has reviewed your application dated March 12, 2003, for approval to commingle gas production from the Gething and Spirit River formations in the subject well.

Both zones are within the gas target area and have not yet been completed or tested. As noted in your application, both intervals may be new pool discoveries. The OGC is concerned that, despite planned initial zone testing, commingled operation will not allow production and pressure monitoring of the individual zones, to access reserves and further pool development potential. In this case, the incorporation of a sliding sleeve, or some other completion arrangement, that will allow future zonal isolation for production and pressure testing would be preferable.

At this point, the OGC wishes to reserve judgment on approval of commingled production until the results of individual zone tests are known. Commingled production approval as requested may be denied, should the gas flow rate on test from each zone be significant.

Should you have any questions, please contact Ron Stefik at (250) 952-0310.

Sincerely,

Peter Attariwala, P. Eng.
Supervisor
Reservoir Engineering
