Dear Ms. White:

**RE: APPLICATION FOR COMMINGLED PRODUCTION  
DOMCAN ET AL RIGEL a-62-K/94-A-10; WA# 13335**

The Commission has reviewed your application dated May 17, 2002 requesting permission to commingle gas production from the Gething and Cecil zones encountered in the subject well.

The Commission has designated these gas pools as the Rigel field Dunlevy "F" and Cecil "A".

Gas compositions are very similar for the two pools, both at an advanced state of depletion. Several other wells have been previously approved to commingle production from these same two pools. A letter of no objection to this application, dated September 12, 2002, has been supplied by the only other operator in the Cecil "A" pool. Commingled completion is expected to increase the productive life of the well thereby increasing the recoverable reserves from both pools.

We wish to advise you that your application to commingle production from these two formations is hereby approved, under the authority of section 41 of the *Drilling and Production Regulation*, subject to the following conditions:

1. Production from the Dunlevy (1048.0 - 1053.0 mKB) and Cecil (1166.0 - 1170.0 mKB) formations may be commingled.
2. Gas, condensate and water production should initially be allocated on the Ministry of Provincial Revenue BC S-1 and BC S-2 forms on the basis of Dunlevy 50% and Cecil 50%. The allocation factors may be amended to reflect results of any future tests.
3. This approval may be modified at a later date if deemed appropriate through a change in circumstances.

Sincerely,

Peter Attariwala, P. Eng.  
Supervisor  
Reservoir Engineering
