Calgary AB T2P 3T7

Dear Mr. Lui:

**RE: APPLICATION FOR COMMINGLED PRODUCTION
ENCO TATTOO b-44-L/94-O-10; WA# 3432**

The Commission has reviewed your application dated May 21, 2002, requesting permission to commingle gas production from the Mattson zones encountered in the subject well.

The Commission designates the gas pools encountered by this well to be the Mattson "C" and Mattson "B" of the Tattoo field. Gas compositions and pressures of the two pools are similar. Completion, testing and production of this well to-date has occurred in a commingled manner. In order to properly account for pool reserves and royalties, commingled approval is required. Continued commingled production is expected to increase total recoverable gas reserves from these zones.

We wish to advise you that your application to commingle production from these pools is hereby approved, under the authority of Section 41 of the *Drilling and Production Regulation*, subject to the following conditions:

1. Production from the Mattson "C" (420.7 – 424.9 mKB) and Mattson "B" (435.9 – 452.3 mKB) zones may be commingled.
2. Gas, condensate and water production should be allocated on the Ministry of Provincial Revenue BC S-1 and BC S-2 forms on the following basis, with amended reportes back to date of initial production:
Mattson "C" (UWI 200B044L094O1002) 40% and
Mattson "B" (UWI 200B044L094O1000) 60%.
3. This approval may be modified at a later date if deemed appropriate through a change in circumstances.

Sincerely,

Ron G. Stefik, AScT
Senior Reservoir Engineering Technician
